Knoxville, AR 72845

The problems of setting a rectangular set on a six wide kiln car, at a rate of 36,000 Kingsize units per hour, and with very limited space were successfully solved (and on time) with an ASI Air Bag Setting System at the Acme Brick – Eureka Plant, located in Clarksville, Arkansas.

ASI's engineers and Acme Eureka personnel looked at both Robotic and Air Bag Systems and came to the conclusion that the Air Bag Setting System would handle the rate by setting on four cars at a time and fit into the limited space in the existing plant

Two unique Air Bag Heads were utilized to set on the four kiln cars at one time. The heads are unique in that they develop a different pattern in both directions plus automatically set the inset pattern on the last two layers of the pattern

The Air Bag Setting System features the following:

- Electric Slug Cutter
- Electric Pusher
- Side by Side Double Bank Wire Cutter
- Wear Resistant Plastic Marshaling Belt
- Electric Spread Table for smooth easy spreading of the brick.
- Two Unique Spreading Air Bag Heads
- Professional on time installation and startup.
- Meeting the requirement and needs of Acme Brick.

Remember ASI for your next setting needs.
